Masonry, and Other Products

The masonry division at Metal Products Company focuses primarily on products that help support the stability of brick wall construction. Our Brick Ties and Seismic Wall Ties are to be mixed in to the brick façade, then nailed to wooden support structures to give one more option for stability. Our Spreader Cleats are used for the support of form footers and grade beams for foundation construction. The Spreader cleats hold these wooden frames in place, helping ensure your concrete pour is even.

Our Strapping division offers multiple ways to connect banding used to tie down finished goods. We have strapping that will connect metal, plastic, and polyester banding. We also offer Metal Edge Protectors that can be used in combination with banding to help tie down your product as tightly as possible without damaging your products.

Here at Metal Products Company, we pride ourselves on being an American manufacturer. We purchase our raw materials domestically, so that we can proudly say, that all of our products are made in the USA.
